NU-CALGON TOTAL GUARD™ SYSTEM

**GUARD AGAINST SLIME WITH NU-CALGON'S "3 STEP PREVENTION PROGRAM"**

Ice is a food product. It is used to cool beverages, preserve food products and it is prominently used in health-care facilities. Because of these applications, it is very critical that the ice be free of bacteria and other organic material. However, the dark moist environment inside ice machines is an ideal environment for the growth of bacteria slime. Nu-Calgon has developed the TOTAL GUARD line of products for sanitizing and maintaining the environment in which ice is produced and stored. The TOTALGUARD family of products are designed to prevent slime growths without compromising the quality of the ice or its food-grade status.

These products perform best when used together as they work in a synergistic fashion to protect your ice and your equipment.
